When buying a vehicle [safety](#) should be your priority.

To avoid having a crash, or being seriously injured or killed if you are involved in a crash, your choice of vehicle could make all the difference.

There are many safe and affordable used vehicles to choose from with the ability to significantly reduce your chance of being killed or seriously injured in a crash, or help avoid a crash altogether.

To make things simple, [Used Car Safety Ratings](#) are available for a range of used vehicles, presented using a star rating scale of 1 to 5 stars where 1-star is the poorest safety performance and 5 is the best.

Used Car Safety Ratings (UCSR)

The safety ratings in this brochure focus on **used vehicles** and are determined through the independent analysis of the latest real-world crash statistics.

The Overall Safety star rating applied to each vehicle rated considers three components of **vehicle safety performance**:

1. How well the vehicle protects its driver from being killed or seriously injured in a crash (Driver Safety rating)
2. How well the vehicle protects other drivers, pedestrians, cyclists and motorcyclists from being killed or seriously injured in a crash (Other Road User Safety rating)
3. The reduction in likelihood of being involved in a crash through key crash avoidance technologies being available in the vehicle (Crash Avoidance rating)

If you want to maximise your safety and the safety of others, look for a vehicle with a 5-star Overall Safety rating and a 'SAFER PICK' marker. These vehicles:

- ✓ provide good protection for the driver
- ✓ are less likely to kill or seriously injure other drivers, pedestrians, cyclists and motorcyclists, and
- ✓ have a lower risk of being involved in a crash due to the key crash avoidance technologies they have.

How the ratings are calculated

Used Car Safety Ratings (UCSRs) are calculated from the analysis of more than 9.5 million vehicles and 2.6 million injured road users in police-reported road crashes across Australia and New Zealand during the period 1987-2023.

Overall Safety star ratings

The UCSR Overall Safety star ratings indicate the average relative risk of being killed or seriously injured (resulting in hospital admission) across all people in a crash involving the rated vehicle. This includes the driver of the rated vehicle and other road users such as pedestrians, cyclists and motorcyclists (vulnerable road users) and occupants of other vehicles. The component ratings for Driver Safety and Other Road User Safety are shown along with the Overall Safety rating.

Demographic factors such as who was driving at the time of the crash and the crash circumstances are taken into account, with ratings adjusted based on:

- driver gender
- no. of vehicles involved
- crash location
- driver age
- crash location
- crash year
- speed limit

The Crash Avoidance rating measures the relative reduction in crash risk in each rated vehicle resulting from the availability of key crash avoidance technologies in the vehicle including electronic stability control, roll stability control, reversing cameras and sensors, autonomous emergency braking, lane keep assist and daytime running lights. The Crash Avoidance component rating for each vehicle is also shown alongside the Overall Safety rating.

The rating scale

561 vehicle models were rated in the 2025 Used Car Safety Ratings update. Based on their relative overall safety performance, these 561 vehicles have been categorised into star rating bands for vehicles manufactured since 2000 which represented the majority of vehicles currently on the road. This brochure includes the ratings for vehicles manufactured after 2001.

The poorest performing 20% of vehicle models gain a 1-star rating, and the 20% of vehicle models offering the highest relative safety performance gain a 5-star rating.

Relative Safety Performance Score

EXCELLENT	★★★★★	81% to 100%
GOOD	★★★★	61% to 80%
MARGINAL	★★★	41% to 60%
POOR	★★	21% to 40%
VERY POOR	★	0% to 20%

Look for a 'Safer Pick'

The **'SAFER PICK'** markers are assigned to vehicles that score a 5-star Overall Safety rating, a 5-star Driver Protection rating and at least 4 stars for Other Road User safety and Crash Avoidance.

Why newer vehicles are safer

Newer vehicles are generally safer than older ones. In fact, older vehicles are over-represented in crashes where someone is killed, and the average age of a vehicle involved in a crash where someone is killed is increasing.

Vehicle safety has improved

The average risk of being killed or seriously injured across all road users involved in a crash with a vehicle manufactured in 2023 is 43% lower than for a vehicle manufactured in 2001.

The average risk to the driver of being killed or seriously injured in a crash in a vehicle manufactured in 2023 is 31% less than in a vehicle manufactured in 2001.

Newer vehicle models feature a wide range of safety features including airbags that protect in frontal and side impact crashes, and crash avoidance technologies such as electronic stability control, autonomous emergency braking, lane keep assist and daytime running lights.

Newer vehicles also must comply with a wider range of regulatory safety standards.

Most vehicles assigned with a 'SAFER PICK' marker were manufactured from 2009 onwards, demonstrating the benefits of newer vehicles in terms of available safety equipment, design integrity, and compliance with safety regulations. Half of the 'SAFER PICK' vehicles were manufactured after 2013.

New vehicle safety

If you're looking to purchase a **new or near-new** vehicle and it is not covered by the Used Car Safety Ratings, ANCAP SAFETY provides comprehensive safety rating information.

ANCAP safety ratings are determined through a series of physical crash tests and collision avoidance tests and assessments undertaken in controlled conditions in test laboratories and on test tracks and cannot be compared directly to the Used Car Safety Ratings.

[ancap.com.au](https://www.ancap.com.au)

For more information about buying a safer used vehicle, contact your local transport agency or visit their website.

Safety features

Newer vehicles provide increased protection in a crash and include a range of active and passive safety features and technologies which can protect and help avoid a crash.

Here are some of the key vehicle safety features you should look for when purchasing a used vehicle.

ANTI-LOCK BRAKE SYSTEM (ABS)

BLIND SPOT MONITORING

AUTONOMOUS EMERGENCY BRAKING (AEB) INCLUDING PEDESTRIAN AND CYCLIST

AIRBAGS – FRONT, SIDE, CURTAIN AND KNEE

LANE DEPARTURE WARNING

LANE KEEP ASSIST

REVERSING SENSORS AND/OR CAMERAS

ELECTRONIC STABILITY CONTROL (ESC)

DAYTIME RUNNING LIGHTS

In many used vehicles, these safety features are optional or available only in some variants, so it is important to check the availability of these features in the specific vehicle you're looking to purchase.

It makes sense to choose a vehicle that has the best Overall Safety star rating and as many of the above safety features as possible to help reduce your risk of being killed or seriously injured or avoid a crash in the first place.

“The Used Car Safety Ratings are an important resource for consumers to maximise safety for themselves and the broader community when purchasing a used vehicle. Prioritising safety in choosing a vehicle has the potential to reduce trauma outcomes related to the vehicle by up to 78% through both preventing crashes and reducing the risk of death or serious injury should a crash occur. If all people prioritized safety in their vehicle purchasing decisions, road trauma in Australasia could be reduced by over 30%.”

Professor Stuart Newstead,
Monash University Accident Research Centre (MUARC)

Australian Government
Department of Infrastructure, Transport,
Regional Development, Communications and the Arts

Department
of Transport
and Planning

The Used Car Safety Ratings (UCSR) are proudly produced by the Monash University Accident Research Centre under the Vehicle Safety Research Group (VSRG) Research Program.
