

Used Car Safety Ratings 2023

Make the **safest** choice.

VSRG | UCSR

**When buying a vehicle,
safety should be the priority.**

**To avoid having a crash or
being killed or seriously injured
if you are involved in a crash,
regardless of who's at fault,
your choice of vehicle could
make all the difference.**

There are many safe and affordable used vehicles to choose from with the ability to significantly reduce your chance of being killed or seriously injured in a crash, or help avoid a crash altogether.

To make things simple, **Used Car Safety Ratings** are available for a range of used vehicles, presented using a star rating scale of 1 to 5 stars where 1-star is the poorest safety performance and 5 is the best.

Used Car Safety Ratings.

The safety ratings in this brochure focus on [used vehicles](#) and are determined through the independent analysis of the latest real-world crash statistics. The Overall Safety star rating applied to each vehicle rated considers three components of [vehicle safety performance](#).

They are:

- How well the vehicle protects its driver from being killed or seriously injured in a crash (Driver Safety rating)
- How well the vehicle protects other drivers, pedestrians, cyclists and motorcyclists from being killed or seriously injured in a crash (Other Road User Safety rating)
- The reduction in likelihood of being involved in a crash through key crash avoidance technologies being available in the vehicle (Crash Avoidance rating)

If you're wanting to maximise your safety and the safety of others, look for a vehicle with a 5-star Overall Safety rating and a 'SAFER PICK' marker.

These vehicles:

- ✓ provide good protection for the driver
- ✓ are less likely to kill or seriously injure other drivers, pedestrians, cyclists and motorcyclists
- ✓ have a lower risk of being involved in a crash through having key crash avoidance technologies available.

[“Serious road trauma resulting from the worst rated car is more than ten times that of the best rated car in the same crash with the same driver.”](#)

Professor Stuart Newstead,
Monash University Accident Research Centre (MUARC)

How are the ratings calculated?

Used Car Safety Ratings (UCSRs) are determined through the analysis of around 9.2 million vehicles and around 2.5 million injured road users involved in police-reported road crashes across Australia and New Zealand during the period 1987-2021.

Overall Safety star ratings.

From 2023, the Overall Safety star rating will be the primary focus of the vehicle safety rating information presented. The UCSR Overall Safety star ratings indicate the average relative risk of being killed or seriously injured (resulting in hospital admission) across all people in a crash involving the rated vehicle including the driver of the rated vehicle and other road users, both vulnerable road users (pedestrians, cyclists and motorcyclists) and occupants of other vehicles. This change acknowledges that consumers are increasingly concerned with how a vehicle will protect its own occupants, in addition to how a vehicle can protect the other road users involved in a crash. The component ratings for Driver Safety and Other Road User Safety are shown along with the Overall Safety rating.

Demographic factors such as who was driving at the time of the crash and the crash circumstances are taken into account, with ratings adjusted based on:

- driver gender
- crash location
- driver age
- crash year
- no. of vehicles involved
- crash location
- speed limit

The Crash Avoidance rating measures the relative reduction in crash risk in each rated vehicle resulting from the availability of key crash avoidance technologies in the vehicle including electronic stability control, roll stability control, reversing cameras and sensors, autonomous emergency braking and lane keep assist. The Crash Avoidance component rating for each vehicle is also shown alongside the Overall Safety rating.

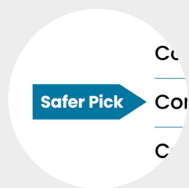

Look for a 'Safer Pick'.

The **'SAFER PICK'** markers are assigned to vehicles that score a 5-star Overall Safety rating, a 5-star Driver Protection rating and at least 3 stars for Other Road User safety and Crash Avoidance.

The rating scale.

518 vehicle models were rated in the 2023 Used Car Safety Ratings update. Based on their relative overall safety performance, these 518 vehicles have been categorised into star rating bands for vehicles manufactured since 2000 which represented the majority of vehicles currently on the road.

The poorest performing 20% of vehicle models gain a 1-star rating, and the 20% of vehicle models offering the highest relative safety performance gain a 5-star rating.

Relative Safety Performance Score:

EXCELLENT	★★★★★	81% to 100%
GOOD	★★★★☆	61% to 80%
MARGINAL	★★★☆☆	41% to 60%
POOR	★★★☆☆	21% to 40%
VERY POOR	★☆☆☆☆	0% to 20%

Newer vehicles are safer.

Newer vehicles are generally safer than older ones. In fact, older vehicles are over-represented in crashes where someone is killed, and the average age of a vehicle involved in a crash where someone is killed is increasing.

Vehicle safety has improved significantly.

The average risk of being killed or seriously injured across all road users involved in a crash with a vehicle manufactured in 2021 is 33% lower than for a vehicle manufactured in 2001.

The average risk to the driver of being killed or seriously injured in a crash in a vehicle manufactured in 2021 is 50% less than in a vehicle manufactured in 2001.

Newer vehicle models feature a wide range of safety features including airbags that protect in frontal and side impact crashes, and crash avoidance technologies such as electronic

stability control, autonomous emergency braking and lane keep assist.

Newer vehicles also must comply with a wider range of regulatory safety standards.

Most vehicles assigned with a 'SAFER PICK' marker were manufactured from 2006 onwards, demonstrating the benefits of newer vehicles in terms of available safety equipment, design integrity, and compliance with safety regulations. Half of the 'SAFER PICK' vehicles were manufactured after 2012.

New vehicle safety.

If you're looking to purchase a **new or near-new** vehicle and it is not covered by the Used Car Safety Ratings, ANCAP SAFETY provides comprehensive safety rating information.

ANCAP safety ratings are determined through a series of physical crash tests and collision avoidance tests and assessments undertaken in controlled conditions in test laboratories and on test tracks and cannot be compared directly to the Used Car Safety Ratings.

[ancap.com.au](https://www.ancap.com.au)

Safety features.

Newer vehicles provide increased protection in a crash and include a range of active and passive safety features and technologies which can protect and help avoid a crash.

Here are some of the key vehicle safety features you should look for when purchasing a **used** vehicle.

ANTI-LOCK BRAKE SYSTEM (ABS)

AUTONOMOUS EMERGENCY BRAKING (AEB)
including Pedestrian and Cyclist

BLIND SPOT MONITORING

ELECTRONIC STABILITY CONTROL (ESC)

AIRBAGS
Front, side, curtain and knee

LANE DEPARTURE WARNING

LANE KEEP ASSIST

REVERSING SENSORS and/or CAMERAS

In many **used** vehicles, these safety features are optional or available only in some variants, so it is important to check the availability of these features in the specific vehicle you're looking to purchase.

It makes sense to choose a vehicle that has the best **Overall Safety** star rating and as many of the above safety features as possible to help reduce your risk of being killed or seriously injured or avoid a crash in the first place.
